

## **Ideas for Hospitals**

to be financially viable and to take good care of their employees and communities

by Lisa Jeanne Graf

1. A hospital could partner with the city to provide preschool care to both employees, and neighborhood families.
2. Hospital Rooms could be better laid out so more could provide more privacy for patients.
3. Have more outreach to autistic candidates and educate staff about possible differences in social skills. Having a different approach to social skills should not be considered a reason to not hire a candidate, or to give a poor review.
4. When possible eliminate fluorescent lights as they can cause eye strain and pain for some people.
5. Community benefits could include paying the full salary of a BPS nurse.
